Full SC-CL
Uniform (observed)
Quota-matched
Uniform (expected)
Relations ranked by training-edge counts. CoDEx-M has no trained controls; its dotted Uniform line is analytic.

Jensen-Shannon divergence (bits)
Lower divergence means closer marginals; it is not an accuracy metric. Hatched bars are analytic expectations.

NELL23K: original graph, QA targets and frozen negative candidates

Uniform expectation uses each eligible question's legal pool; gray heatmap rows have no observed gold QA.

CoDEx-M: original graph, QA targets and frozen negative candidates
185,584 train edges | 51 relation labels | 2,715 eligible QA | 24,435 negative slots

Uniform (expected)
CoDEx-M: no trained Uniform/quota controls. Dotted lines and hatched bars are analytic legal-pool expectations.

Uniform expectation uses each eligible question's legal pool; gray heatmap rows have no observed gold QA.

WN: 55 historical training pairs unverified; retain parent masks. Conditional baseline is the analytic legal-pool Uniform.
